The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 09/760,196	Applicant(s) VINDEKILDE, SUSANNE	
	Examiner Richard C. Weisberger	Art Unit 3693	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 14 and 16, 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Bond Markets Go Electronic.

The reference teaches a buyer terminal having an output device for presenting offerings of the interests and an input device for entering one or more investment criteria; and a computer coupled to the buyer terminal, a data store coupled to the computer including offerings of a plurality of trading parties, the computer including programming for selectively identifying from the data store offerings of the plurality of trading parties responsive to the investment criteria, the computer providing information related to identified offerings responsive to the investment criteria of all trading parties for presentation together on the output device. See the description of bondtrac and bond express and the teaching that the information can be sorted by “anyway you can imagine”. Examples of search criteria are said to include price maturity and yield. Official notice is taken that computers have memory for storing this investment criteria.

The applicant argues that the primary reference fails to teach of programming that causes the at least one computer to accept selection, via the input device, of information displayed on the output device and to create a tradable order corresponding to one of the offerings that is related to the selected information.

In one interpretation of this language,, the teaching reads on the "flagging" step of paragraph 7. That is, the “flagging” is both a selection step and a visual creation step. The claims language does not expressly claim of the computer programmed to send the order to the counterparty.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 9-12 and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bond Markets Go Electronic.

The reference fails to teach the limitations directed to selectively limiting and selecting granting dealer access. The examiner takes official notice that it is well known in the art of OTC trading to control access to trading information. It would have been obvious for one skilled in the art at the time to add added this feature to the systems described in the cited article as motivated by the need to encourage trader participation.

The applicant argues that the primary reference fails to teach of programming that causes the at least one computer to accept selection, via the input device, of information displayed on the output device and to create a tradable order corresponding to one of the offerings that is related to the selected information. Given a second interpretation wherein a tradeable order is sent to a tr
